## EXPERIENCE

### Software Engineer

#### Consumer Priority Service

June 2018 - present, Brooklyn, NY

- Built an automated ETL pipeline that pulls data from dealers' PayPal accounts and corroborates invoices against the amount paid to dealers, resulting in fewer overpaid balances.
- Rearchitected internal bug reporting system to classify bugs more granularly, resulting in an increase in developer efficiency fixing the most critical bugs.
- Connected internally developed ticket system to Trello, upgrading workflow options for employees.
- Integrated MailChimp API that records customers who unsubscribed from mailing campaigns, preventing sales representatives from initiating unwelcome communication.
- Enhanced accounting stats dashboards by cleaning up SQL queries in order to portray more accurate results.
- Transformed VB .NET legacy codebase into more readable, speedy, and maintainable code.

### Data Science and Engineering Intern

#### Gerson Lehrman Group (GLG)

July 2017 - August 2017, New York, NY

- Visualized employee and customer activity from financial SQL queries to determine call cancellation fees using Jupyter Notebook.
- Implemented dynamic survey questions into a React web app, displaying unique results for each customer.
- Optimized the feedback question table schema in a MSSQL database for speed and clarity.

### Technical Writer at 9to5Toys

#### 9to5Mac

February 2017 - August 2017, Remote Position

- Conducted research of new tech products and published complete coverage on the daily
- Blogged about the best deals in tech, home appliances, and clothing
- Tested and reviewed various tech products in categories such as headphones, speakers, and smart home devices

---

## PROJECTS

### RecipeJoiner

- Developed a RESTful API that interfaces with the backend
- Utilized React components to implement features to view, edit, and create recipes along with recipe categories
- Deployed to Heroku at [recipejoiner.herokuapp.com](https://recipejoiner.herokuapp.com).

### Transaction Formatter Finance App

- Scripted a program that converts CSV files with transaction data into a standardized format.
- Graphed the loaded CSV file in Jupyter to manage personal finances and help drive budgeting decisions.

### Contacts App

- Starting with a boilerplate, added to a contacts app to get experience with React Native.
- Experimented with react-navigation to implement navigation between pages and modals.

---

## EDUCATION

### Bachelor of Arts in Computer Science

Queens College • Flushing, NY • 2018 • 3.4

---
